

# Leedz Invoicer

<https://github.com/scottgrossworks/invoicer>

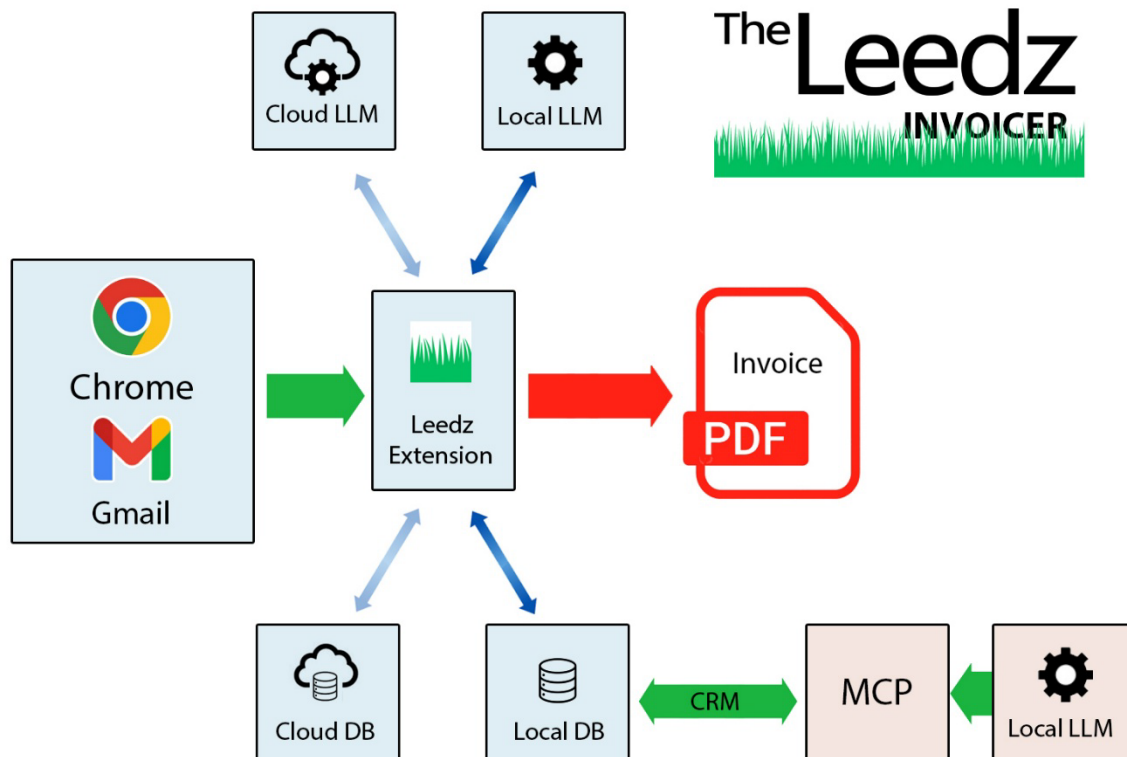

**Leedz Invoicer** is a tool for small-business vendors and party performers that generates one-shot invoices from a Gmail thread and stores the info in a MCP-enabled CRM that you can query using an LLM.

## Problem

Often it takes several time-consuming emails back and forth with a client to book an event and add it to your calendar. Once it's booked, an hour goes by and you get involved in other other work. Once you switch gears, the client requests an invoice and you have to stop what you're doing for more paperwork.

## Solution

Invoicer uses a chrome extension to scan a client's email thread, generate a basic invoice, and then send the info to a database. Generating the invoice goes from a 10-minute distraction to a 10 second button-push. The resulting CRM records every billed client, when and where you worked for them and how much they paid you. You can interact with the DB via an LLM, obviating the need for expensive client-management software like Streak.

## Step 1 – Capture Booking

A client emails you a booking request. You open the Leedz Extension to capture the booking info and save it to a schema database, either local or in the cloud.

The screenshot shows a Gmail interface with an email from 'Sunshine Kids Foundation' to 'Laura Mazariegos'. The email content describes a 'California Fun-Time Fantasy' event on September 18, 2025, at the Sheraton Universal Hotel. The Leedz extension is open on the right, displaying a 'Capture Booking Information' form. The form fields are populated with data from the email, including the name, email, phone, company, description, location, start/end dates and times, duration, hourly rate, flat rate, and total amount. The form also has a 'notes' field and buttons for 'Clear', 'Save', and 'PDF'. Below the form, a green bar displays a log of actions, including 'SAVED FUNCTION COMPLETED SUCCESSFULLY'.

Field	Value
name	Laura Mazariegos
email	laura@sunshinekids.org
phone	
company	
description	
location	Sheraton Universal Hotel, Universal City, CA
startDate	September 18, 2025
startTime	7:00 PM
endDate	September 18, 2025
endTime	9:00 PM
duration	2 hours
hourlyRate	\$150
flatRate	\$0
totalAmount	\$300.00
notes	

Clear Save PDF

SAVED FUNCTION COMPLETED SUCCESSFULLY

## Step 2 – Invoice Settings

Configure your business information.

The invoice can be configured with your Bank information, WIRE and routing numbers.

Users can preview the generated invoice and save it to the database.

PDF files (< 200Kb) are saved to local machine.

#### **Step 4 – CRM via LLM**

The client and booking information are saved to an MCP-fronted database. The result is a record of the business that can be queried in natural language. As more queries are exposed, the user will have many of the insights available in a commercial CRM available in a conversational chat. As those chats integrate more tools, the potential for client management grows.
